WE SEE FAR,
BEYOND OBSTACLES,
AND FIND
THE SOLUTION.

SPECTROMETRY AND
APPLIED ELECTRONICS

itphotonics

ITPhotonics

We are a dynamic and creative company founded in 2012, specialising in spectrometry and applied electronics. We use our theoretical and practical knowledge and methodologies to design and build electronic systems and measuring instruments.

Our core business is applied spectrometry, in its various forms and for each application sector. We work to design and build systems for rapid and non-destructive measurements, suitable for all contexts where precise, immediate and multiparametric information is required. This allows us to study and obtain technological solutions for various fields of application, to manage the variables necessary for the integration of systems in different environments and to solve the specific needs of each production process.

We are versatile
and multisectoral,
our ideas have no
boundaries.

*Those who contact us have
the opportunity to meet a
partner able to offer:*

KNOW-HOW

**EXTREME
SPECIALISATION**

**COMPLETE DESIGN
AND PRODUCTION,
"TURNKEY"**

We love challenges,
especially those that
involve finding a solution
to the customer's specific
problems.

***We look for them, we are passionate about them,
we implement them.***

And the field of application is not an obstacle,
because our preparation allows us to collaborate
with multiple sectors, including:

AGRICULTURAL
AND AGRI-FOOD

INDUSTRIAL

CHEMICAL
AND SCIENCE

Our operating methodology adapts to the objectives and characteristics of the customer through an in-depth comparison process to clearly understand the particular need, including the point of identifying the most suitable solution to achieve the goal.
